

Landon White

This project ended up taking a much different form than what I initially planned. I found that trying to teach the intricacies of CTF challenges while building a website when I had only moderate experience in both fields was difficult. Additionally, I felt that there was not enough content to justify a whole website for USC CTF team, as most of what I was creating ended up being about the challenges or concepts in general

I am happy with how the design came out. It took a while to figure out what layout I wanted, but I thought a 4 quadrant approach throughout every page would be unique and also challenging to implement across these different types of pages (especially the contact one). I'm also happy with the overall sleekness of the website, spare some image files that I just could not end up happy with, dispute numerous CSS revisions and usage of different substitute images.

I think the portfolio demonstrates a lot of my past, present, and future accomplishments, and is something that I legitimately intend to use for recruiting once I get some feedback on it.

No external resources were used in the making of the portfolio. Every single line of code has come from a concept that I have learned through Prof. Nguyen.

Thank you to him and all of the TAs. Have a happy holiday season.
